Mobile Application Configuration Service Release Notes 1.2.0

Overview

This document describes any feature enhancements, fixed issues, and known issues for the 1.2.0 release of Sugar's Mobile Application Configuration Service (MACS). MACS is available to OEM partners, implementation partners, and customers running Enterprise or Ultimate editions of Sugar.

Feature Enhancements

The following feature enhancements are included in this release of MACS:

- [Option to Delete Apps](#) : Users now have the ability to delete apps created in MACS.

Fixed Issues

The following issues have been resolved in this release of MACS. [Case Portal users](#) can use the following links for more details about each issue:

- [78395](#) : Attempting to access the Mobile Tools Portal page may result in an error if the current user's username or email address includes a trailing space.
- [78400](#) : Creating new builds of an app without entering a subscription key may improperly build a trial version of the app.
- [78401](#) : Certain subscription keys may be considered invalid when building a new app.

Known Issues

The following are known issues in this release of MACS. [Case Portal users](#) can use the following links for more details about each issue:

- [77649](#) : When selecting app colors, the color palette may fail to respond as expected.

Supported Platforms

For a complete list of supported platforms for Sugar's mobile solutions, please refer to the [Mobile Supported Platforms](#) page.
