# Mobile Application Configuration Service Release Notes 1.4.0

## Overview

This document describes any feature enhancements, fixed issues, and known issues for the 1.4.0 release of Sugar's Mobile Application Configuration Service (MACS). MACS is available to OEM partners, implementation partners, and customers running all supported versions of Sugar Enterprise, Ultimate, Serve, Sell Advanced, or Sell Premier.

## Feature Enhancements

The following feature enhancements are included in this release of MACS:

- **Android apps generated as an AABfile:** In compliance with new Google Play Store requirements, MACS now provides an Android App Bundle (AAB) file instead of an Android Package (APK) file for the Android app. See [this article](#) on the Google Developers Blog for more details on AAB files and this transition. Note that this will also affect builds created using the [Mobile SDK](#).

## Supported Platforms

For a complete list of supported platforms for Sugar's mobile solutions, please refer to the [Mobile Supported Platforms](#) page.
