

How To Amend Your Drill Search

Apple / iOS

01 DRILL TRAIL

When drilling into your data, a chronological history of your active search actions will populate at the top of the screen.

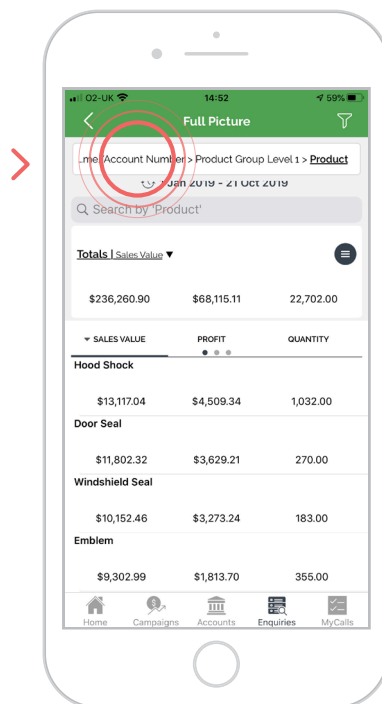

Your location within this drill trail will be in bold text.

02 MOVE BACK IN THE DRILL TRAIL

You can move backwards and forwards along your drill trail by tapping on the action in the trail you wish to revisit.

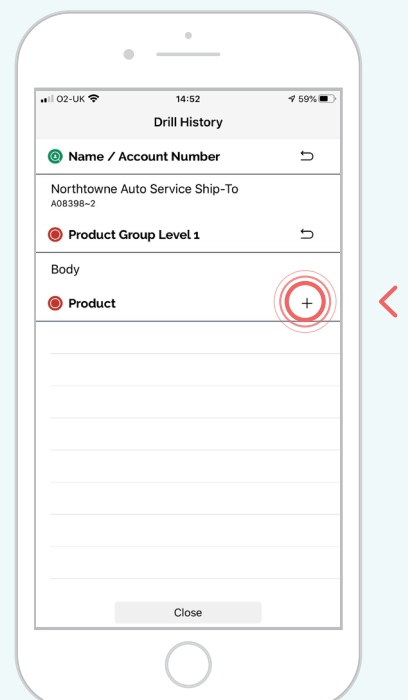

In this example, tap on the action Account Number in the trail.

03 EDIT TRAIL

You can edit the actions made along your drill trail.

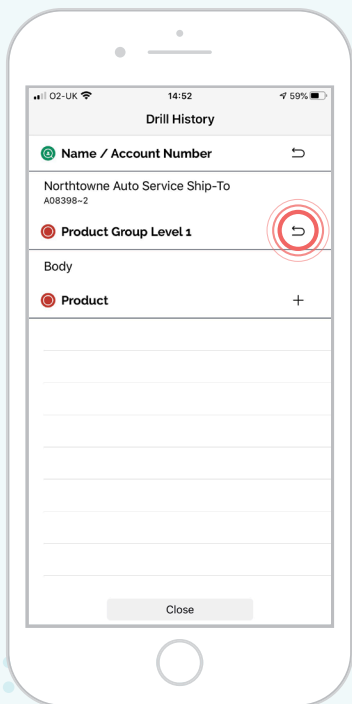

Once you have selected a drill trail action, you can add a Second Dimension to your report by tapping the '+' symbol on the bottom option

04 SELECT BUBBLE

You can also amend your search by tapping the '↩' on any of your icons you wish to amend.

This will take you back the bubble previously selected and allows you to drill into a new bubble.

05 RESULTS

From here you can use the drill icon to take you to the bubble screen and choose a new path into your data if you need to.
