Sugar Ultimate 7.8.2.2 Release Notes

Overview

This document describes the changes and functionality available in Sugar Ultimate 7.8.2.2. For more information on the changes in this release, please refer to the [What to Expect When Upgrading to 7.8](#) article.

Sugar 7.8.2.2 is available for both On-Demand (Sugar-hosted SaaS) and On-Site deployments.

Administrator and End User

Fixed Issues

Sugar 7.8.2.2 is a security update released to address certain security vulnerabilities identified during our routine QA checks.

We strongly recommend that you install this update at the earliest opportunity. While we have not experienced any reported incidents relating to these vulnerabilities to date, failure to install this update could leave you exposed to malicious third party attacks. For more information regarding this, please refer to the following Security Advisory announcements:

- Security Advisory [sugarcrm-sa-2017-006](#): Authenticated users may cause arbitrary SQL to be executed.
- Security Advisory [sugarcrm-sa-2017-007](#): Authenticated users may access system files.
- Security Advisory [sugarcrm-sa-2017-008](#): Unauthenticated users may cause arbitrary code to be executed.

These vulnerabilities have been addressed in release 7.8.2.2 which is available for download from the Download Manager.

Administrators are strongly encouraged to upgrade their Sugar instances running 7.8.2.1 and prior to version 7.8.2.2 to prevent potential exploitation of these weaknesses.

Known Issues

The following are known issues in this release. Support portal users can use the

following links for more details about each issue:

- 61338 : When test entries are deleted from the campaign, the related campaign emails that are sent to targets may not be viewable and display an error (Error retrieving record. This record may be deleted or you may not be authorized to view it).
- 64880 : Certain fields (e.g. email address, phone, etc.) in the Users module may not be available to add as field variables in PDF templates.
- 65527: The SugarCRM cube icon is used as the system-wide favicon even when "Display module icon as favicon" is enabled in Admin > System Settings.
- 65647 : Users will not see updates to their avatar images without first logging out and back into Sugar.
- 65674 : Selecting an item from the Recently Viewed list under the module tab does not correctly update the list to include the selected record.
- 66209 : Help text is not being displayed.
- 66520 : Notes may not be edited directly from the Contracts module's Notes subpanel.
- 66573 : More than one user attempting to merge records simultaneously results in errors.
- 66580 : List view loads may experience performance issues as quantity of records loaded increases.
- 66826 : Numerical fields such as Bug Number may not be used with type-ahead functionality to generate a list of potential matches when relating records.
- 66842 : Relate fields cannot be sorted as expected in the list view.
- 66900, 67294 : Resetting the forecast time period does not set the current time period correctly and causes various issues in the application.
- 66910 : The notification for Cases module does not include the case number as expected when triggered via the workflow.
- 66995 : The Display server response times option is improperly available to select via Admin > System Settings.
- 67886 : During lead conversion, the newly created opportunity record does not get associated to the Revenue Line Item, causing the lead conversion to not complete successfully. As a workaround, create the opportunity record during lead conversion then manually associate the opportunity to the Revenue Line Item.
- 68024 : The Case Number, Date Created, and Created By field values for the Cases module may not get populated in workflow alerts that are triggered on first save.
- 68095 : Text provided for Campaign Tracker URLs is unexpectedly shortened after the first 30 characters.
- 68112 : Matrix-type reports display incorrectly when exported to PDF.
- 68245 : Calendar dashlet may be missing from Legacy dashboard after upgrading to 7.2.0.

-
- 68426 : New panels added to the Record View layout in Studio do not display the panel options (Display Type, Collapse?) until the layout is saved in Studio.
 - 68440 : Quick creating (e.g. Leads, Contacts, etc.) via the Emails dashlet on the Legacy dashboard opens up the legacy create view instead of the sidecar record view.
 - 68461 : Searching by non-primary email addresses in the module's list view (e.g. Accounts) does not pull up results as expected.
 - 68464 : Changes made to record view layouts via studio are not reflected when quick creating records until after the full creation view is used.
 - 68975 : Changing the order of subpanels via Admin > Display Modules and Subpanels does not preserve the order upon save.
 - 68979 : Changing the currency of a quote multiple times may introduce rounding errors to the line item price fields.
 - 69184 : Creating a custom field may not work as expected if there are numerous custom fields and large amounts of data existing in the module.
 - 69391 : Changes made to module names via Admin > Rename Modules are not reflected on list views columns for modules which relate to the affected module. The column names may be corrected individually by modifying each listview's column labels via Studio.
 - 69508 : Relating a new record via the Legacy module subpanel (e.g. Calls) in a module's record view (e.g. Leads) causes the Next and Previous buttons to no longer appear in the record view. Navigating back to the list view and selecting a record will correct the issue by restoring the buttons again in the record view.
 - 69801, 69918 : Changing the style attributes for table tags, image tags, etc. on email templates via HTML may result in parts of the code getting removed upon save.
 - 69982 : Old Value variables (e.g. `{::past::Opportunities::sales_stage::}`) inserted in workflow alert templates may not display the correct value in the email as expected.
 - 69985: If a custom module has a relationship with an individual Activity-type module (e.g. Tasks), this related module may not be available to select when creating a workflow action to create a record in a module (Tasks) associated with the target module (e.g. custom module). As a workaround, create a one-to-many relationship between the custom module and the Activities module, and the appropriate Activity-type module (e.g. Tasks) will be available to select when creating the workflow action
 - 70024 : Scheduled reports may have incorrect or missing charts in the emailed PDF. Select "Print as PDF" from the report's Actions menu to see the updated chart.
 - 70106 : The Skype icon does not appear next to the phone number as expected when the SkypeOut integration is enabled.
 - 70124 : Studio's formula builder displays several undesired functions (getListWhere, isForecastClosed, isForecastClosedWon, and isForecastClosedLost).
 - 70389 : Tabbing while inline editing the address block in the record view does

not work as expected as it does not tab through all the fields (e.g. state, postal code, etc.) within the address block.

- 70542 : The "Show Completed Meetings, Calls, and Tasks" option is not available in Calendar > Settings, which can cause performance issues in the Calendar module for users who have a large number of activity records. Setting Admin > System Settings > vCal Updates Time Period to "-1" will relieve the performance delay, however this will prevent user availability information from appearing when scheduling a call or meeting.
- 70553 : Disabling export via Admin > Locale does not remove the Export option as expected from the list view.
- 70601 : Custom HTML files including javascript may not render correctly after upgrade to 7.5.0.0.
- 70751 : Modules set as disabled in Sugar continue to improperly appear in the Sugar portal. Administrators can disable the modules via roles in Sugar portal, which should resolve the issue.
- 71446 : For opportunities and revenue line items, changes made to labels via Studio > {Module Name} > Labels do not affect list view labels. Make changes to labels via Studio > {Module Name} > Layouts > List View to modify list view layouts.
- 71733 : Printing archived emails via the browser's print option may not display correctly.
- 71807 : Studio layouts appear in reverse order when right-to-left themes are enabled.
- 72022 : The Projects module is incorrectly available to select via Admin > Mobile.
- 72098 : Clicking the "Restore Default" button in Admin > Studio automatically saves and displays the out-of-the-box default layout despite not saving the change in Studio.
- 72264 : Clicking on the opportunity's name in the Quotes detail view after downloading the quote to PDF improperly redirects to the home page instead of the opportunity's record view. As a workaround, right-click on the opportunity name after downloading the quote to PDF and the opportunity's record view will open accordingly.
- 72286 : The Opportunity module's amount fields cannot accept negative values.
- 72326 : Restricting dropdown options (e.g. moduleListSingular) via Admin > Dropdown Editor applies to Advanced Workflow modules which may result in unexpected behavior.
- 72409 : When generating a report, labels may improperly overlap in the chart (e.g. Vertical Bar chart) causing the labels to be unreadable.
- 72588 : Synchronizing the Google Calendar with the Sugar calendar may not sync the tasks as expected.
- 72590 : The Due Date field may not be available to select when mass updating in the Tasks module. To resolve the issue, navigate to Admin > Studio > Tasks > Fields and disable the Mass Update option for the Due Date field then enable it again.

-
- 72882 : When accessing Sugar using Internet Explorer, the date picker does not display properly and disappears when using the scroll bar on the page. As a workaround, scrolling with your mouse or trackpad will display the calendar picker properly.
 - 72887 : Customizing a role-list while creating a custom DropDown field in Studio causes the new field to not be saved. As a workaround, create and save the new field before making changes to any role-lists.
 - 72903 : The Save button on the Visual Design toolbar of a process definition does not consistently assume an inactive state to indicate that recent changes have been saved.
 - 72906 : Non-admin users who have developer-level role access to Sugar modules do not have access to the Advanced Workflow panel on the Admin page. These users may navigate to Process Management via the Processes module tab menu.
 - 72955 : Module loader does not prevent packages containing invalid characters from being uploaded to Sugar which can issues when upgrading to version 7.x as invalid characters are not allowed.
 - 72956,73729 : Populating a target list by selecting a report for a module (e.g. Accounts) may not add all records as expected if the report contains a large amount of data.
 - 72962 : Dependent fields containing a related() function may cause the data to not display as expected in the module's list view.
 - 73009 : When the total file size in the ./upload/upgrades/module/ directory is large, it may cause performance issues in Admin > Module Loader.
 - 73187 : Tabbing while inline editing the address block for account and contact record's may not work as expected as it does not tab through all the fields (e.g. state, postal code) within the address block.
 - 73301 : Attempting to edit Sugar Logic formulas with too many lines in the formula may cause an error ("Formula Builder: Error Loading Content") in Studio's formula builder. As a workaround, edit the formula to remove any line breaks.
 - 73372 : During process execution, the process user can edit the Assigned To field but it will not be saved. The process user should instead use the "Change Assigned To User" option in the target record's actions menu. This option must have been enabled by the administrator in the process definition's design.
 - 73379 : Advanced Workflow dashlets do not automatically refresh when toggling between tabs within the dashlet.
 - 73384 : Add Related Record actions cannot be used in process definitions when the target module is set to "Revenue Line Items".
 - 73391 : Process activities related to a lead or contact record cause the Suffix, First Name, and Last Name fields to display on separate rows on the form execution screen.
 - 73468 : Time-elapse workflow may not trigger as expected when a date field (e.g. Expected Close Date) in the condition is set to a date in the future.
 - 73485 : Parent modules incorrectly appear in related module dropdown lists.

-
- 73488 : Re-ordering list view columns does not work as expected for iPad and mobile devices.
 - 73492 : Sorting the Forecasts module by Likely, Best, or Worst fields may not sort by the base currency amount as expected.
 - 73566 : Calculated or dependent fields containing a related() function may not get calculated until after save for activity-type modules (e.g. Notes).
 - 73569 : Attempting to add a row to an existing quote record may not work as expected when accessing Sugar via certain browsers (e.g. Chrome, Safari) on iPad.
 - 73689: When users adjust the list view or subpanel column widths, the user's preferred column size may not be preserved if the browser window is resized.
 - 73891 : Attempting to reorder subpanels in the module's record view may not work as expected when logged into Sugar using Chrome on Windows. As a workaround, disable the "Enable Touch Events" option for Chrome and users should be able to drag and drop subpanels accordingly.
 - 73929 : Cases created from inbound emails may improperly display the case's description as HTML.
 - 74097 : Changing the instance's opportunity model from "Opportunities and Revenue Line Items" to "Opportunities" may cause data to not display correctly when viewing the campaign's ROI.
 - 74118 : The My Items filter is incorrectly available for use in the Processes list view and dashlet.
 - 74349 : Creating and saving a record assigned to a team that the current user is not associated to may display an error even though the record gets created.
 - 74350 : An unexpected error may occur when saving a record if there is an issue with the user's default team in the database. As a workaround, run the following query in the instance's team sets table: UPDATE team_sets SET deleted = 1 WHERE id NOT IN ("SELECT team_set_id FROM team_sets_teams WHERE deleted = 0") AND deleted = 0. The affected users will then need to edit their profile to configure their default teams again.
 - 74382 : The Case Summary dashlet may not work as expected and cause an internal server error if the account record has a large number of related cases.
 - 74421 : Passing text including an ampersand (&) into an API call may cause the call to fail.
 - 74475 : Clicking a button (e.g. Plus button) in the subpanel (e.g. Emails) before the module's record view completes loading may result in unexpected errors.
 - 74628 : Certain workflows using a Relate-type field in the condition may fail to load as expected and result in errors after upgrading to 7.6.x.x. As a workaround, run the following query in the instance's expressions table: UPDATE expressions SET exp_type = "id" WHERE exp_type = "relate" AND lhs_field = "assigned_user_id".
 - 74434 : The layout for the Revenue Line Items create subpanel in the Opportunities module cannot be modified via Admin > Studio.
 - 74539 : Custom fields may not display as expected when previewing call and

meeting records via the intelligence pane.

- 74687 : Avatar field marked as required in Admin > Studio may cause Sidecar modules to not save as expected and result in an error.
- 74818 : List view column widths for custom modules may appear collapsed after upgrading from Sugar 7.5.x.x to 7.7.x.x. To resolve the issue, administrators can navigate to Admin > Studio to change the module's list view column width or users can manually resize the column widths via the module's list view.
- 74892 : Processes that copy the value of a blank date field will terminate in an Error status.
- 74893 : Opportunities with expected closed dates prior to a certain time period (e.g. 1/1/1970) may cause the Forecast Bar Chart dashlet to not display as expected.
- 74912 : In the Process Business Rules module, it is possible to create a business rule that exceeds the maximum SQL query length, resulting in a Javascript error and blank screen on save.
- 74919 : Performing certain actions (e.g. Quick Repair and Rebuild) in Sugar that rebuild the cache files may cause unexpected issues in the system if there are multiple users logged in and utilizing Sugar. As a workaround, perform such actions during off-hours where users are not utilizing the system.
- 75254 : Printing reports (e.g. Summation With Details report) to PDF may not work as expected when logged into Sugar via a mobile browser.
- 75258 : Mass updating or importing records (e.g. cases) that are related to records (e.g. accounts) with large datasets may result in PHP memory errors.
- 75302 : Activities (e.g. calls and meetings) created via the Calendar module tab's actions menu may not appear in the calendar grid as expected. Reloading the web browser will display the newly created activity (e.g. call) in the calendar grid.
- 75446 : The values of custom relate fields created in Studio are not listed as Available Fields for process email templates.
- 75481 : When duplicating a PDF template via Admin > PDF Manager, the template's body is not visible. Save then edit the duplicate record to view and modify the template.
- 75482 : Editing all recurrences of a call or meeting with invalid recurrence rules may result in unexpected behavior.
- 75689 : Users assigned a role where access to the Contacts module is disabled may see the Import button improperly appear on the D&B: Contact Information dashlet which results in an error when clicked.
- 75916 : Customizing JS and other core files may cause customizations to not work as expected after upgrading to 7.7.x.
- 75939 : Importing a large number of records (e.g. 8,000) in Sugar may fail to import as expected. As a workaround, break up the import file into smaller batches with less than 5,000 records.
- 75940 : Mass deleting more than 20 Account records with numerous related records may fail to delete as expected and result in an error.

-
- 75960 : Running JQuery version 2.x (e.g. 2.0.1) in PHP may cause unexpected issues when utilizing Sugar. Reverting to JQuery version 1.x (e.g. 1.1.0) should resolve the issue.
 - 76007 : Inline editing the User field for records in the module's list view (e.g. Accounts) may display an error upon save for users assigned a role with View and Edit permissions set to "Owner". Reloading the web browser will resolve the issue and display the updated assigned user's name for the record in the list view.
 - 76014 : Mass-updating a large number of records that trigger the start event on one or more process definitions will result in a PHP timeout error. Additionally, any processes created before PHP timed out may be corrupt.
 - 76040 : Certain modules may be marked as customized in Admin > Studio > Export Customizations after installing or upgrading to 7.7.0.0.
 - 76067 : Certain meters (e.g. Standard Contacts, Family Tree, Accounts) in the D&B: Usage Meter dashlet may not show the used credit levels in green.
 - 76068 : The D&B: Usage Meter dashlet may not display correctly when the connector is enabled for the Standard license type.
 - 76107 : Generating Calls, Meetings, or Tasks reports grouped by "Day" for Date or Datetime fields (e.g. Day: Start Date, Day: Date Created, etc.) may result in a database failure error for certain database stacks (e.g. DB2).
 - 76113: When accessing Sugar using Chrome or Firefox, clicking the "i" icon for Call, Meeting, or Task record cells on the calendar view may cause the calendar grid to appear blank and improperly display the more information pop-up window at the bottom of the screen.
 - 76124: Users assigned a role with View permission set to "None" for a module (e.g. Contacts) may be able to preview the module record via the Search and Add drawer for Sidecar modules.
 - 76126 : When entering a dependency formula for a DropDown-type field, clicking the Cancel button on Studio's formula builder may not close the window as expected and result in an error.
 - 76130: Printing reports with charts (e.g. Summation-type reports) to PDF may not display correctly when logged in with languages using right-to-left script (e.g. Arabic, Hebrew).
 - 76141 : When related record subpanels in Legacy module detail views (e.g. Contracts) are collapsed for newly created records, the double arrow icon may no longer appear for users to expand the subpanel. As a workaround, refresh the page and the double arrow icons will appear again.
 - 76151 : When viewing Sidecar module records in list view, Firefox users cannot click the "x" to cancel an applied saved filter as expected. As a workaround, apply the All {Records} filter to reset the list view.
 - 76166,76167 : Users are improperly allowed to set the lead's status to "Converted" via the Leads subpanel and Mass Update panel.
 - 76494 : For some On-Demand instances, the Forecasts list view may not display as expected after upgrading to 7.7.0.0.
 - 76524 : Dependent fields may not appear in the layout (e.g. Record View) as expected if the parent field (e.g. parent dropdown) is not present.

-
- 76574 : Disabling and enabling modules via Admin > Search then scheduling a system index prior to saving may cause a 500 error to occur when performing a global search.
 - 76698 : Previously existing reports may not display the Primary Team Name field values (e.g. East) as hyperlinks after upgrading to 7.7.1.0. Creating a new report including the Primary Team Name field will display the field values as hyperlinks as expected.
 - 76699 : When logged into Sugar using certain browsers (e.g. Internet Explorer 11), multiselect-type fields may not display properly when inline editing or mass updating the field via the module's list view.
 - 76794 : Process email templates may not properly translate field variables for certain language packs, causing a database error when the message is sent.
 - 76968 : Deploying packages in Module Builder may fail with an error when temp files are detected in the file system by the package scanner.
 - 76985 : When performing a global search, filtering by a module then hitting the Enter key after entering the search term may cause a 500 error to occur.
 - 77005 : The View Change Log option may disappear from the custom module's record view after upgrading to 7.7.1.0.
 - 77015 : When using the SetRequired dependency, any required fields that are not completed do not get highlighted when in-line editing and saving the record.
 - 77205 : Viewing a page (e.g. list view) in Sugar without performing any actions for a period of time (e.g. 3 minutes) may cause an error message (Request Timeout: The server is not responding. Check your internet connection.) to appear unexpectedly.
 - 77271 : The Visibility Editor window may not load as expected and display an error if there is a large number (e.g. 400) of dependent values added to the parent dropdown in the Visibility Editor.
 - 77302 : Upgrades may fail due to queries posted by the upgrade exceeding the max_allowed_packet database setting.
 - 77340 : Removing the Expected Close Date column via Admin > Forecasts Settings may cause the forecast worksheet and the Forecast Bar Chart dashlet to display incorrectly.
 - 77362 : When creating or editing an alert email template for workflows, certain related modules may not be available to select as expected in the Related Module dropdown field.
 - 77372, 77612 : When logged into Sugar using the Chrome browser, highlighting/selecting text in certain fields (e.g. Description, Name) may cause issues loading the browser and display an error. As a workaround, edit the field without highlighting any text to make the necessary changes.
 - 77539 : Changing the boost value for a field (e.g. Name) may not affect the relevancy of the field for full text search, resulting in unexpected behavior.
 - 77549, 77932 : Users may be logged out unexpectedly or experience performance degradation when user records are modified.
 - 77626 : A user's default selected teams apply retroactively to records they created prior to enabling team-based permissions.

- 77651: Locked fields in a process definition for the Product Catalog, Projects, and Project Tasks modules do not work as expected.
- 77659: When using a process business rule, a process definition's gateway will only evaluate return values that are string field types and boolean = true. All other return value types (e.g. number or boolean = false) will not be properly evaluated by gateways.
- 77673 : When logged into Sugar using Safari 9, clicking the team name (e.g. East) in reports may improperly open Sugar's home page instead of navigating to the team's detail view.
- 77731 : Advanced Workflow locked fields may cause performance issues in list views.
- 77965 : Deleting a field in Studio may not work as expected when logged into Sugar with a non-English language (e.g. Portuguese, German, Spanish).
- 78065 : Moving a stock field between the columns (e.g. Hidden, Available) for the List View and Subpanel layouts in Studio may result in unexpected behavior.
- 78108 : User sessions that expire while accessing a Legacy module (e.g. studio) may cause the cross-site forgery error message to appear. As a workaround do the following: do not have multiple browser tabs open when accessing Legacy modules, raise the access_token_lifetime value to a higher value than 3600 seconds, and log out and log back in to reset the token lifetime before doing any work in Studio.
- 78128 : For dropdown list values, a value's Display Label will improperly revert to a blank value if its Item Name is 0 (zero).

Supported Platforms

For information on supported platform components, see Sugar 7.8.x Supported Platforms.
