Sugar Corporate 6.7.1 Release Notes

Overview

This document describes the changes in Sugar Corporate 6.7.1. Fixed issues in versions 6.5.11 and 6.5.12 will be included in 6.7.1.

Sugar 6.7.1 is available for Sugar On-Demand (Sugar-hosted SaaS) deployments only.

Known Issues

The following are known issues with Sugar 6.7.1:

- 59109 : Sales managers' "No Opportunities" checkbox available in User Profile > Advanced is not respected in the Forecasts module. Checking this box will not prevent the user from seeing a row and a worksheet for their own opportunities.
- 59213 : Renaming the Forecasts module in Admin > Rename Modules does not affect all instances of the word "Forecast".
- 61232 : After an opportunity is first loaded to the Forecasts module, any updates to the opportunity's probability will not affect its forecasting range. The opportunity will retain the original range designation throughout the sales cycle according to its original probability.

Fixed Issues

The fixes for Release 6.7.1 are detailed below:

- 40114 : Custom relate field does not auto-populate properly in the Quick Create layout.
- 55322 : Vertical bar chart dashlets do not adhere to column width settings on the user's Home page.
- 56692 : Editing stock fields causes SQL errors when deploying custom modules.
- 61442 : Clicking "Save and Continue" button multiple times on the Calls module causes incorrect module records to display in flex relate field search results.
- 61652 : Dashlet tool tips display "Undefined" when hovering over a bar chart dashlet.

-
- 62076 : Reports do not respect the user's default currency to properly convert the displayed amounts.
 - 62130 : Calculated field with the isValidDate function results in a PHP error upon saving the record after upgrading.
 - 62168 : Calendar module fails to load properly when logged in with Brazilian Portuguese language.
 - 62263 : Report fails to export to a CSV file when logged in with German language.
 - 62306 : Matrix report chart does not display as expected when added as a dashlet on the Home page.
 - 62317 : Report results in MySQL database error when a user with owner-only list role attempts to run it.
 - 62343 : Reports list view renders improperly and generates an error when accessed by a user assigned a role with Forecasts access type set to "Disabled."
 - 62419 : Saving system settings reverts active SAML Configuration.
 - 62445 : Editing a call while logged in with a language other than English (e.g. Danish, German, etc.) causes the Duration field to change and display an incorrect value in the detail view.
 - 62477 : Navigating to Studio > Contacts > Labels displays "null" on page and does not render the labels as expected.
 - 62527 : Calculations using currency fields do not display properly in edit view when using comma separators.
 - 62617 : Resetting module in studio after custom field creation results in a PHP error.
 - 62654 : Attempting to access external Google docs via the Documents module results in an error.
 - 62701 : The date picker when clicking the Calendar icon displays incorrectly when logged in with English UK language.
 - 62804 : Full Text Search results on top are briefly blocked by popup help text.
 - 62918 : Adding Member Of field to Contracts layouts results in PHP errors when navigating to Contracts detail view.
 - 62969 : Deleting list item(s) from parent_type_display and record_type_display dropdown fields via Dropdown editor does not remove the items as expected.
 - 63286 : The call Duration field defaults to an incorrect value and the duration minutes are duplicated in the dropdown list when logged in with a non-English language.
 - 63395 : Custom module(s) in instances causes upgrade to fail.

For more information on a bug or to provide feedback, use the SugarCRM Bug Tracker located at <http://www.sugarcrm.com/support/bugs.html>. To view the complete list of bugs fixed in this specific release, run a search using "6.7.1" in the Targeted Release field. Look for the bugs marked "Fixed" in the Resolution field.

To report a new issue found in this release, use "6.7.1" in the Found in Release

field. Check the Bug Tracker for known issues prior to submitting bugs. You will be able to update existing bugs with additional information, as necessary.

Supported Platforms

For information on supported platform components, see [Sugar 6.7.x Supported Platforms](#).

Acknowledgments

SugarCRM would like to thank the following community member for developing feature enhancements in Release 6.7:

- Cedric Mourizard, Synolia
- Stephen Ostrow
