Sugar Professional 7.6.0.0RC4 Release Notes

Overview

This document describes the functionality available in Sugar 7.6.0.0RC4.

- Sugar 7.6.0.0 is available for both on-demand (Sugar-hosted SaaS) and on-site deployments.
- Release 7.6.0.0RC4 is for new installations only as there is no upgrade path to 7.6.0.0RC4.

Feature Enhancements

Feature enhancements in release 7.6.0.RC40 include the following:

Version 7.6.0.0RC4

- [Calls](#) and [Meetings](#) user interface : Calls and Meetings now use the improved Sidecar framework.
- [Column resizing](#): Column sizes for list views and subpanels may now be set by administrators. End users may adjust the admin-specified column sizes on list views, subpanels, etc. by expanding and collapsing the list view columns. Sugar will render the user's preferred column size across sessions until the user removes or resets the relevant browser cookies.
- Arabic language support: Users may now choose Arabic as their preferred language in Sugar. The user interface will automatically adjust to right-to-left mode.
- [Chart dashlet configuration options](#): The chart dashlet now has various configuration options (e.g. Chart type, Value placement, etc.) available to allow users to customize their chart dashlets based on their viewing preference.
- [RSS Feed dashlet](#): RSS Feed dashlets are now available to display external RSS feeds on dashboards and intelligence panes.
- Date field filters : Date fields (e.g. Date Created) can now be filtered based on Today, Yesterday, and Tomorrow values.
- Flex Relate field filters : Flex relate fields are now available when creating search filters in Sidecar modules.
- First Day of Week setting : The first day of week setting in user preferences is now respected by calendar pickers in Sidecar modules.
- [Health check](#) : All upgrades to 7.6 will have a health check performed to

-
- ensure that the Sugar instance is suitable for upgrade.
 - Manufacturers module available in reports : The Manufacturers module is now available on the Reports module.
 - [Additional schedulers added](#) : The "Remove diagnostic tool files", "Remove temporary files", and "Remove temporary PDF files" schedulers are now available via Admin > Schedulers.
 - [Rebuild Sidecar Files repair](#) : The Rebuild Sidecar Files repair option is now available via Admin > Repair.
 - [D&B pagination support](#): The D&B "Import and Enrich" and "Contact Information" dashlets now support pagination.
 - [IPO Date filter criteria added to D&B Build a List](#) : The IPO Date field is now available as a filter criteria in the D&B IPO Data panel.
 - [Bulk import accounts for D&B Build a List](#): D&B Build A List for Accounts now allows multiple companies to be imported into Sugar at once.

Known Issues

The following are known issues in version 7.6.0.0:

- [65527](#): The SugarCRM cube icon is used as the system-wide favicon even when "Display module icon as favicon" is enabled in Admin > System Settings.
- [65647](#) : Users will not see updates to their avatar images without first logging out and back in to Sugar.
- [65674](#) : Selecting an item from the Recently Viewed list under the module tab does not correctly update the list to include the selected record.
- [66209](#) : Help text is not being displayed.
- [66520](#) : Notes may not be edited directly from the Contracts module's Notes subpanel.
- [66573](#) : More than one user attempting to merge records simultaneously results in errors.
- [66580](#) : List view loads may experience performance issues as quantity of records loaded increases.
- [66826](#) : Numerical fields such as Bug Number may not be used with type-ahead functionality to generate a list of potential matches when relating records.
- [67294](#) : Resetting the forecast time period does not set the current time period correctly and causes various issues in the application.
- [67445](#) : Multiple panels cannot be added as expected to the Record View layout in Studio.
- [68095](#) : Text provided for Campaign Tracker URLs is unexpectedly shortened after the first 30 characters.
- [68245](#) : Calendar dashlet may be missing from Legacy dashboard after upgrading to 7.2.0.

-
- [68426](#) : New panels added to the Record View layout in Studio do not display the panel options (Display Type, Collapse?) until the layout is saved in Studio.
 - [68440](#) : Quick creating (e.g. Leads, Contacts, etc.) via the Emails dashlet on the Legacy dashboard opens up the legacy create view instead of the sidecar record view.
 - [68461](#) : Searching by non-primary email addresses in the module's list view (e.g. Accounts) does not pull up results as expected.
 - [68464](#) : Changes made to record view layouts via studio are not reflected when quick creating records until after the full creation view is used.
 - [68975](#) : Changing the order of subpanels via Admin > Display Modules and Subpanels does not preserve the order upon save.
 - [68979](#) : Changing the currency of a quote multiple times may introduce rounding errors to the line item price fields.
 - [69391](#) : Changes made to module names via Admin > Rename Modules are not reflected on list views columns for modules which relate to the affected module. The column names may be corrected individually by modifying each listview's column labels via Studio.
 - [69508](#) : Relating a new record via the Legacy module subpanel (e.g. Calls) in a module's record view (e.g. Leads) causes the Next and Previous buttons to no longer appear in the record view. Navigating back to the list view and selecting a record will correct the issue by restoring the buttons again in the record view.
 - [70024](#) : Scheduled reports may have incorrect or missing charts in the emailed PDF. Select "Print as PDF" from the report's Actions menu to see the updated chart.
 - [70106](#) : The Skype icon does not appear next to the phone number as expected when the SkypeOut integration is enabled.
 - [70124](#) : Studio's formula builder displays several undesired functions (getListWhere, isForecastClosed, isForecastClosedWon, and isForecastClosedLost).
 - [70553](#) : Disabling export via Admin > Locale does not remove the Export option as expected from the list view.
 - [70601](#) : Custom HTML files including javascript may not render correctly after upgrade to 7.5.0.0.
 - [70619](#) : The Cases module search does not support searching for a comma-separated list of case numbers. To specify a list of cases, create a filter using the "is any of" operator.
 - [70748](#) : The target list's Total Entries field does not display the correct count based on the number of related target list records. Reloading the web browser will resolve the issue and display the correct count.
 - [71446](#) : For opportunities, changes made to labels via Studio > {Module Name} > Labels do not affect list view labels. Make changes to labels via Studio > {Module Name} > Layouts > List View to modify list view layouts.
 - [71621](#) : Dependent fields are not visible to users with a role set to "None" for the parent field.
 - [71807](#) : Studio layouts appear in reverse order when right-to-left themes are

enabled.

- [71808](#): Merging a record that contains the Global team results in the user being unable to select or deselect the Global team.
- [71809](#): Search filters do not allow the selection of blank dropdown options.
- [72098](#): Clicking the "Restore Default" button in Admin > Studio automatically saves and displays the out-of-the-box default layout despite not saving the change in Studio.
- [72357](#): Alert message displays when completing the installation of Sugar using IE browser (9, 11). Clicking the Retry button in the dialog box will open Sugar accordingly.
- [72882](#): When accessing Sugar using Internet Explorer, the date picker does not display properly and disappears when using the scroll bar on the page. As a workaround, scrolling with your mouse or trackpad will display the calendar picker properly.
- [72884](#): When filtering on currency fields (e.g. Likely) for opportunities, performing a search does not return results as expected when based on the user's preferred currency.
- [72887](#): Customizing a role-list while creating a custom dropdown field in Studio causes the new field to not be saved. As a workaround, create and save the new field before making changes to any role-lists.

Fixed Issues

The following issues have been resolved in version 7.6.0.0:

- [70900](#): Dependent fields in the module containing a related() function cause the module list view's checkbox selection and Mass Actions menu to not work as expected.
- [72624](#): Read-only dependencies are not respected properly on the list view layout for custom modules.

For more information on a bug or to provide feedback, use the SugarCRM Bug Tracker located at <http://www.sugarcrm.com/support/bugs.html>. To view the complete list of bugs fixed in this specific release, run a search using "7.6.0.0rc4" in the Targeted In Release field. Look for the bugs marked "Fixed" in the Resolution field.

Additional Product Information

Sugar 7.6.0.0 does not include support for the following pieces of functionality:

-
- Customizations to add iframes are fully deprecated and not supported in Sugar 7.
 - Use of fieldset-with-labels fields is deprecated in 7.5 and will be removed in 7.6.
 - Sugar Mobile Plus is not supported in Sugar 7.

Supported Platforms

For information on supported platform components, see [Sugar 7.6.x Supported Platforms](#).
