wDocs Release Notes

Overview

This document describes any feature enhancements, fixed issues, and known issues for the [wDocs plug-in for SugarCRM](#). Please refer to the [W-Systems Supported Platforms](#) page to determine which version of the wDocs package you should be using with your version of Sugar.

Latest Release

wDocs 5.19

Feature Enhancements

The following feature enhancement is available with this release:

- This release of wDocs adds support for Sugar 11.3.0. Please refer to the [W-Systems Supported Platforms](#) page to determine which version of the wDocs package you should be using with your version of Sugar.

Previous Releases

wDocs 5.12

The following feature enhancement is available with this release:

- This release of wDocs adds support for Sugar 11.2.0. Please refer to the [W-Systems Supported Platforms](#) page to determine which version of the wDocs package you should be using with your version of Sugar.

wDocs 5.07

The following feature enhancement is available with this release:

- This release of wDocs added support for Sugar 11.0.1 and 11.1.0. Please refer to the [W-Systems Supported Platforms](#) page to determine which version of the wDocs package you should be using with your version of Sugar.

wDocs 5.03

The following feature enhancement is available with this release:

- This release of wDocs added support for Sugar 11.x. Please refer to the [W-Systems Supported Platforms](#) page to determine which version of the wDocs package you should be using with your version of Sugar.

wDocs 4.56

The following feature enhancement is available with this release:

- Added support for QR codes. Users can now generate QR codes upon merge with the help of the `{field_name format='qrcode'}` tag included in templates.

The following fixes are available with this release:

- Merging a document template with Barcode syntax does not generate a barcode in the merged document.
- The File Name of the merged document is not saved when a document is created.

wDocs 4.51

The following feature enhancement is available in this release:

- Added support for Sugar 10.x

wDocs 4.39

- A tag option for image field scaling has been added to Relate Fields. This option allows you to insert images to your templates and set the scale to a dimension you prefer. (Only available for the Quoted Line Items Module).
- We introduced line breaks to formulas. Users can add an extra parameter after each field in Sugar formulas ("`\n`") and wDocs will format them using line breaks. Unfortunately, the "`\n`" will be visible on the Sugar record view as a string. The line break will appear only after merging the template.

wDocs 4.38

-
- Minor fixes and performance updates.

wDocs 4.37

- A Validate button has been implemented in the Documents module, in the Record View, after a new wDocs template is uploaded to the module. An error message will be displayed if the uploaded template contains syntax errors. The "no error" text will be displayed if the template uploaded is correct.
- By default, when iterating product bundles through a Quote (Quote Groups from the Quotes module), an empty quote bundle would be added. To avoid this, please insert a new If conditional to your template: `{if name.length > 0}`

wDocs 4.36

- Starting with wDocs 4.36, a default Flex Relate Field type has been implemented. When merging a document from a record that has a related parent in the Flex Relate field, the document will be linked to the parent record's Document Subpanel as well.
