# Sugar Professional 6.7.9 Release Notes

## Overview

This document describes the changes in Sugar 6.7.9.

Sugar 6.7.9 is available for Sugar On-Demand (Sugar-hosted SaaS) deployments only.

## Fixed Issues

Sugar 6.7.9 is a security update released to address certain security vulnerabilities identified during our routine QA checks. All on-demand 6.7 instances have already been upgraded to 6.7.9 to address the following types of malicious third party attack:

- 71890 : Unauthenticated users may retrieve contents from system-generated files.SugarCRM Mobile

Customers utilizing the SugarCRM Mobile application will need to upgrade the application to our latest release, version 2.3.1, in order to maintain full mobile functionality. Release 2.3.1 is already available for download from the app stores (Apple, Google), and customers are encouraged to upgrade to this version at their earliest convenience. Sugar instances do not need to be upgraded before upgrading SugarCRM Mobile applications to 2.3.1.

## Known Issues

The following are known issues with Sugar 6.7.9:

- 59109: Sales managers' "No Opportunities" checkbox available in User Profile > Advanced is not respected in the Forecasts module.
- 59213 : Renaming the Forecasts module in Admin > Rename Modules does not affect all instances of the word "Forecast".
- 61232 : After an opportunity is first loaded to the Forecasts module, any updates to the opportunity's probability will not affect its forecasting range. The opportunity will retain the original range designation throughout the sales cycle according to its original probability.
- 67579 : The IBM Smartcloud Connector does not allow users to access their Smart Cloud accounts.

---

## Supported Platforms

For information on supported platform components, see [Sugar 6.7.x Supported Platforms](#).

## Acknowledgments

SugarCRM would like to thank the following community members contributing to release 6.7:
